

PID Clinic

Jennifer Kemp  [0000-0003-4086-3196](https://orcid.org/0000-0003-4086-3196)

Strategies for Open Science (Stratos)

Co-funded by
the European Union

Session overview

To gather input from attendees on priorities, trends and questions in a structured, interactive session (using Menti) to help facilitate discussion during and following the conference

Two dozen participants from a range of stakeholder roles and geographic locations participated

Gaps in the PID Landscape

Rank the following (1st=most concerning)

Participants were asked to choose:

If you could snap your fingers and make something happen but could pick only ONE of the following...

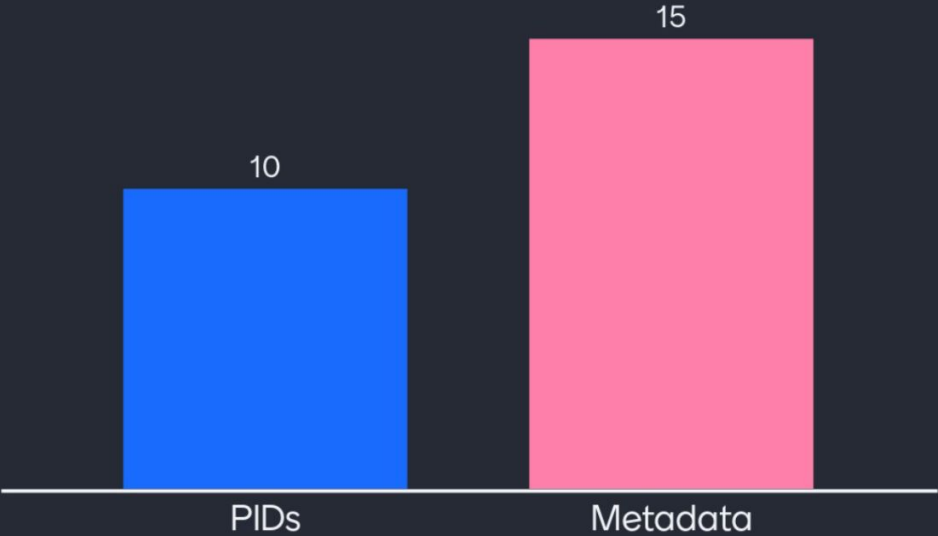

Tough (theoretical) choices

If you had to choose only ONE of each

- PIDs OR metadata
- Policy OR practice
- Community-specific and tailored OR broad and general
- Existing OR emerging PIDs

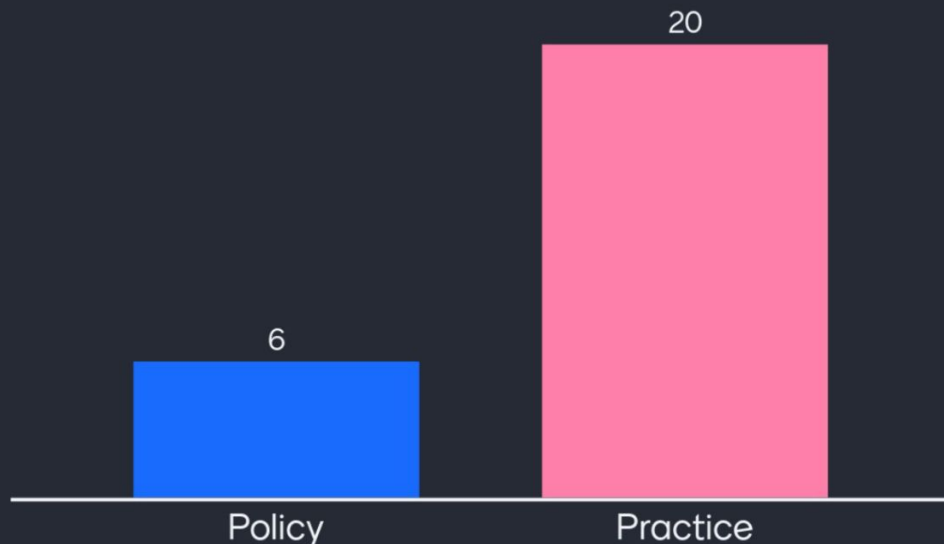

People would do a good job with one OR the other

If you had to choose only ONE of each

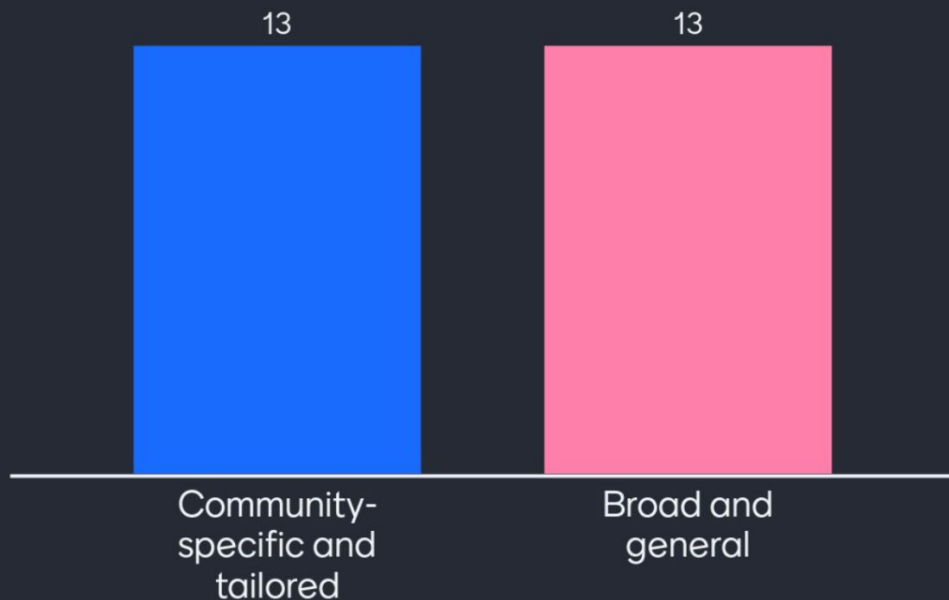

You could require PIDs/metadata OR the community does a good job on its own

If you had to choose only ONE of each

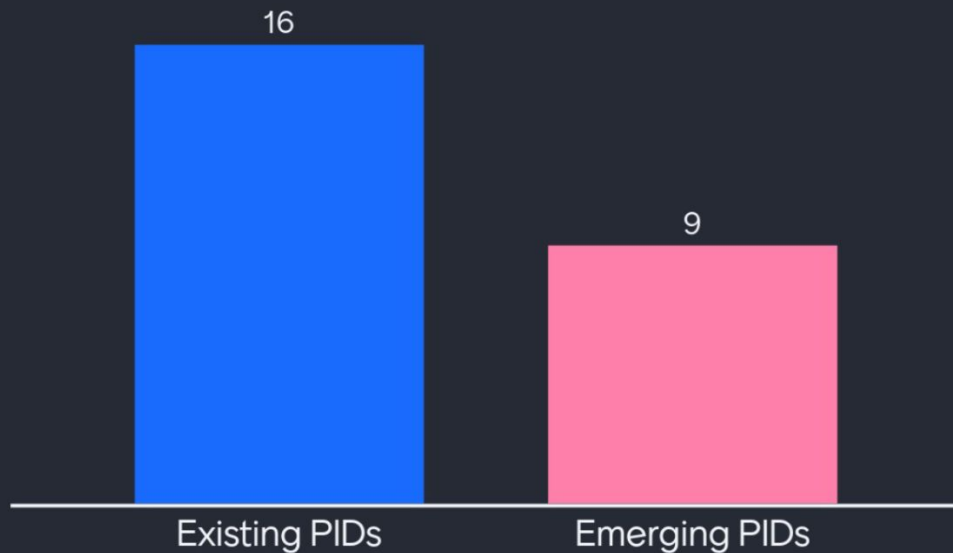

PIDs/metadata are tailored and niche OR broad and general

If you had to choose only ONE of each

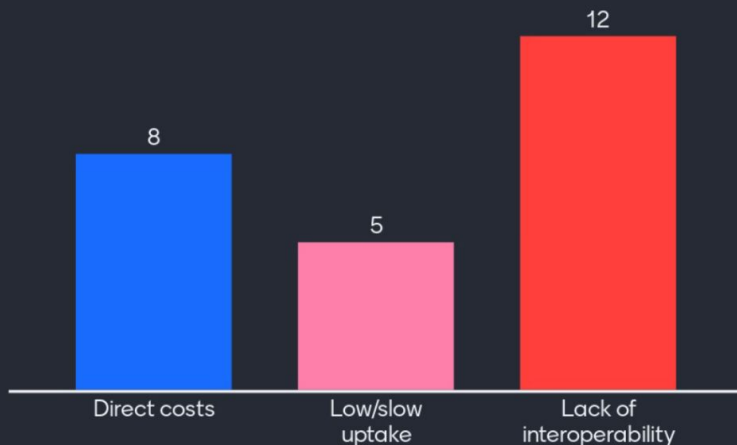

Good work on existing PIDs OR emerging PIDs only?

If you had to choose only ONE of each

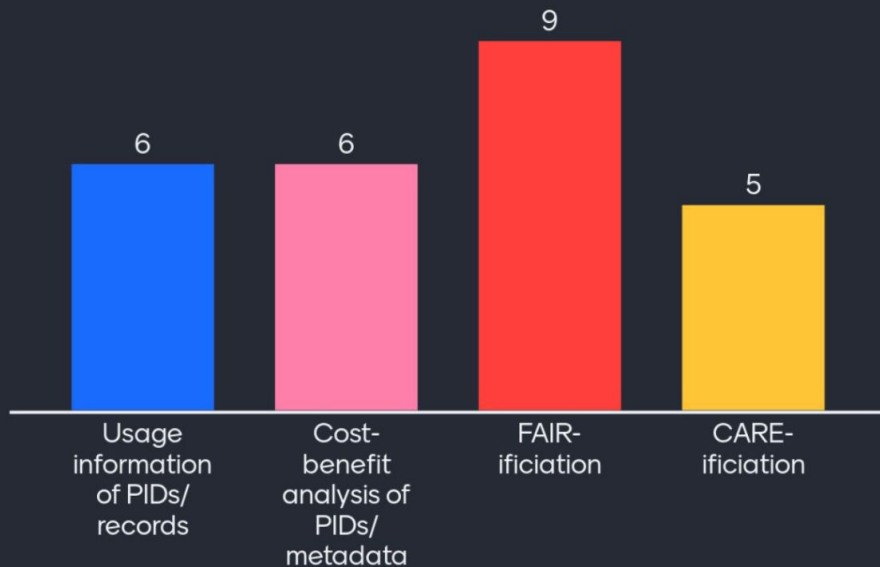

Which barrier would you eliminate?

Which one of the following would you eliminate?

Which one of the following would you choose to have?

Which one would you add?

What are your biggest priorities?

What do you hear more about lately?

Trends and emerging topics

Decentralized PIDs
